## Who is Honeywell Building Solutions ?

**Honeywell Building Solution (HBS) is a leading provider of technical solutions and services.**

- **Design, Installation, Commissioning and Service:**
- **Fire and Security**
- **Building Management**
- **Energy**
- **Networks Solutions**
- **Refrigeration Systems**
- **Managed Services**
- **Managed Services Networks**

### **Innovation**

- **Leading global provider of integrated building solutions.**
- **Deliver measurable value to our customers.**
- **Open systems.**
- **Ground breaking solutions**

## Integrated Systems – Example

# **West Cheshire College** Integrated Building Technology

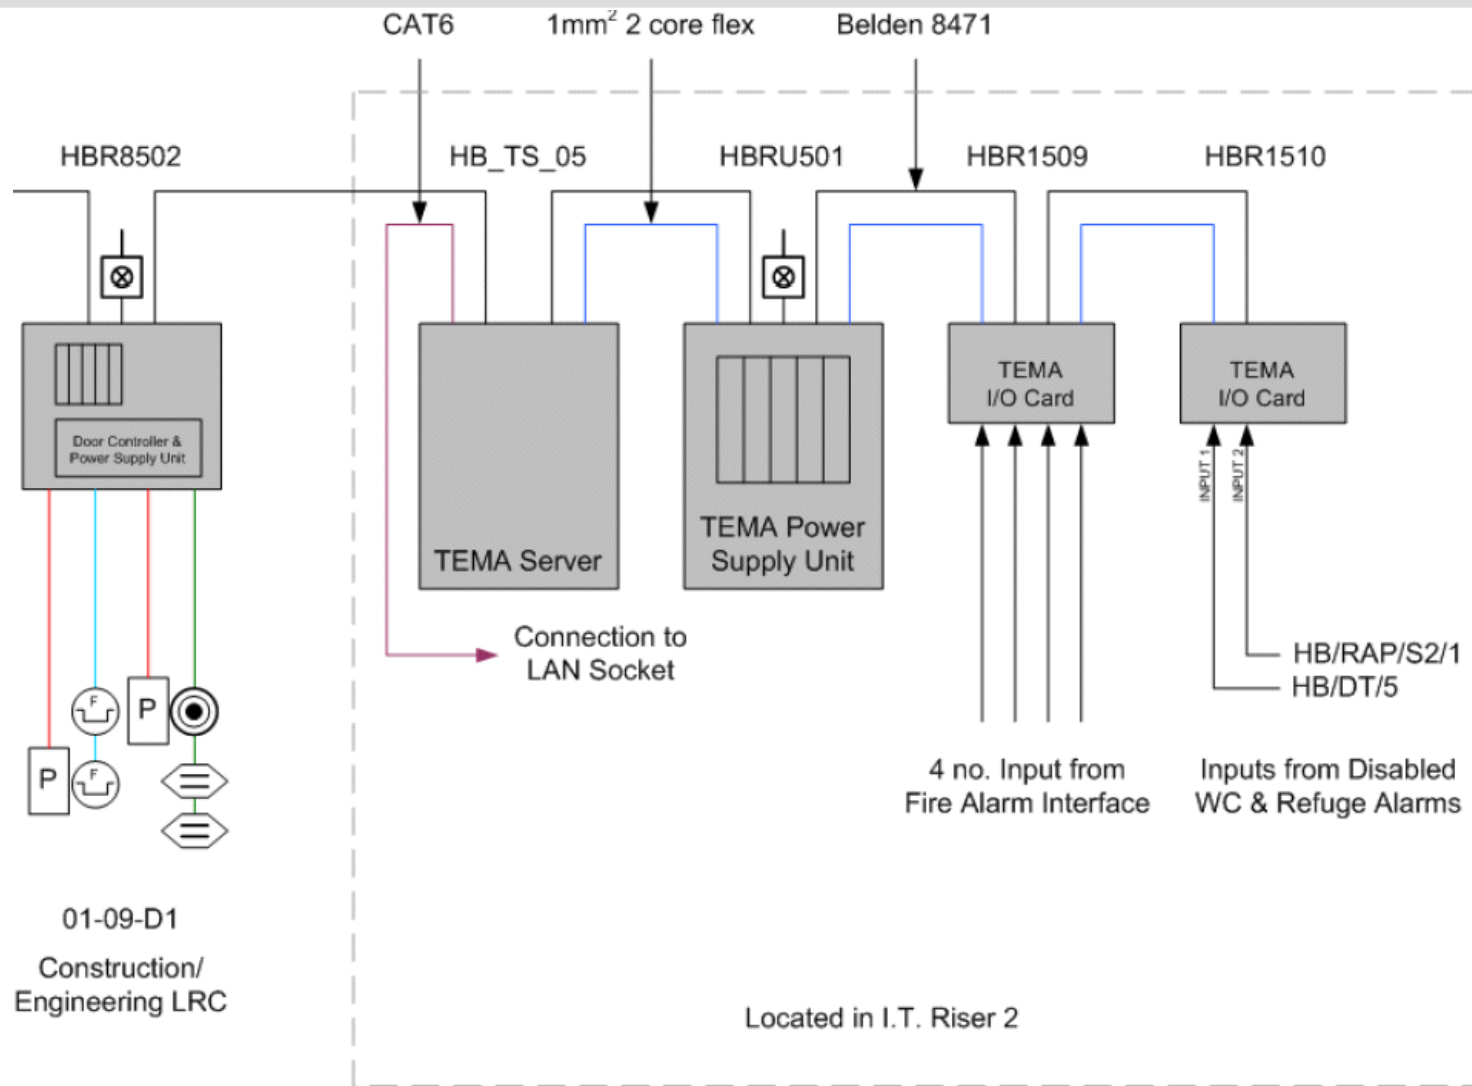

1. Structured Cabling
2. Switched Data Network
3. Wireless Data Network
4. HVAC
5. Life Safety systems
6. Access Control
7. CCTV
8. Intruder and Hold-up System
9. Lighting Control
10. Building Systems Integrator
11. Unified Communications
12. IPTV and Video on Demand
13. RFID

# Access Control

- Monitor and control exit and entrance doors
- Log all transactions through all controlled doors
- Front end system to add, delete and modify users
- Live geographical layouts show how many persons are present in each learning area
- Read-in : Push button out or Read-in : Read-out can be configured
- Proximity readers using the Wiegand protocol are installed and both HID cards and fobs are being used
- Magnetic locks used that can withstand up to 5kN force
- Emergency links to the Fire Alarm system to unlock doors
- TEMA servers connect to the IP network and to the EBI
- TEMAline devices connect to the server on a LONworks bus
- Each TEMA server has its own PSU and battery backup

## Access Control

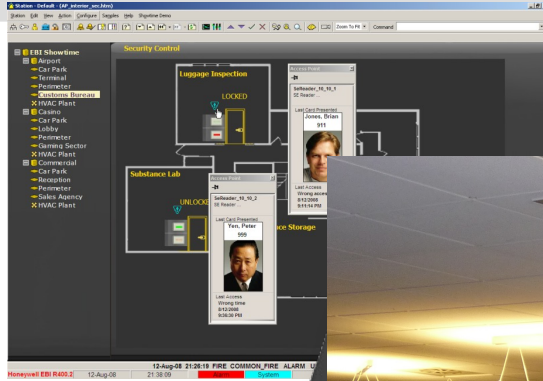

# Access Control

EBI Graphical information includes:

- Live status of each access control door.
- Modification and addition of card holders.
- Creation and implementation of access rights, groups and time periods.
- Manual control of individual access control doors.
- Event logging with respect to individual card holders with time/date stamp.
- Alarm management.
- CCTV image
- Last transit identification, including picture of card holder
- Area occupancy, including cardholder in area information

## Security Management System

# Incident Management

- Data is represented in a consistent manner and all can be viewed from a single location: determining a sequence of events is made much easier.

The screenshot displays the Honeywell EBI R300.1 software interface, which is used for incident management. The main window is titled "Station - Default - Alarm Summary(sysAlarmSummary.htm)". It features a table of alarms with columns for Date & Time, Source, Condition, Operator, Action, Priority, Description, Value, and Un... (Unacknowledged). The table lists several alarms, including "Fire\_Alarm" and "SMOKE\_1\_State", with their respective conditions and priorities.

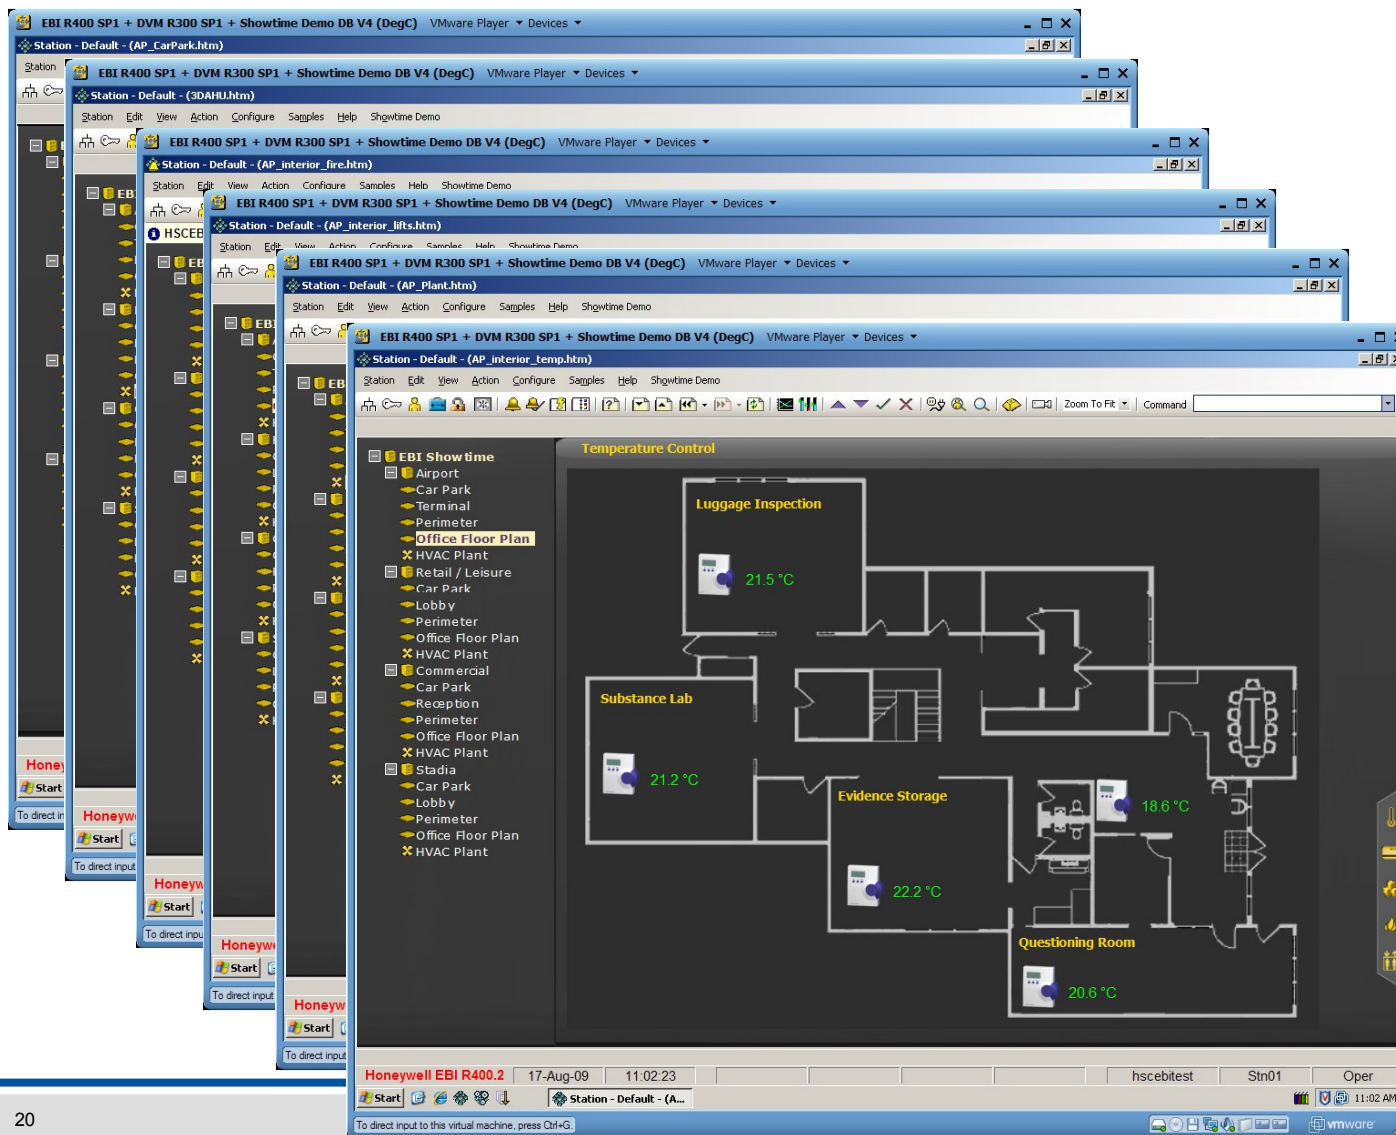

Below the alarm table, there is a section for "Alarm Details" with tabs for "General" and "Comments". The "General" tab shows the alarm's status and a list of comments. The "Comments" tab is currently active, showing a comment from ".Administrator" dated 22/11/2006 15:36:58, stating: "Visually checked alarm. No fire detected. Need to check detector. Service request raised."

At the bottom of the interface, there is a status bar showing the current date and time (22-Nov-06 14:59:14), the system name (System Fire\_Alarm), and the alarm status (ALARM U 00 Alarm). The status bar also includes a "Pause" button and an "Acknowledge Page" button.

In the background, another window titled "Station - Default - (FIRE.htm)" is visible, showing a floor plan of "Level 1 - Terminal 1" with rooms labeled "Room 1", "Room 2", and "Customs". There are also buttons for "General Alarm", "Fire Alarm", "Security Alarm", and "HVAC Alarm".

## Graphical User Interface

# Monitoring Functionality

- Summary of Features
  - Smart trap management and SNMP polling (including SNMP V3) to reduce network bandwidth and resource utilization.
  - Powerful root cause analysis and false positive elimination.
  - Smarter alerts for operators
  - Total flexibility independent of hardware or software vendor.
  - Fault and event storm management.
  - Stateful event correlation.
  - Scalable client-server, multi-threaded architecture.
  - Service Level Agreement (SLA) compliance monitoring.
  - Seamless integration with industry standard software such as HP Openview.
  - Any IP based devices can be monitored dependant on capabilities.

# Reduced Capital Costs

Technology as a fundamental part of an Education College business strategy:

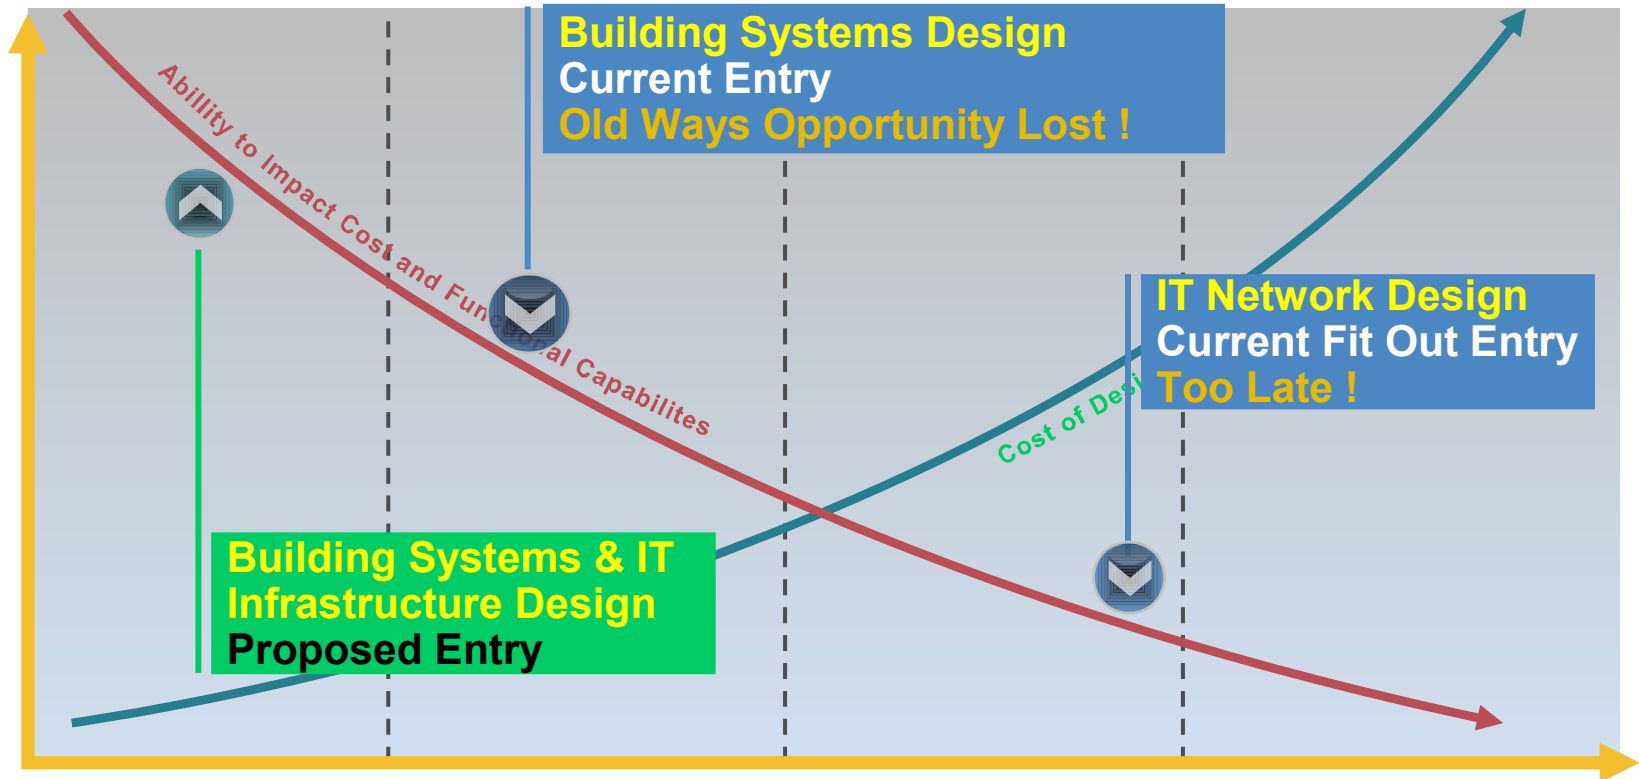

- Integrated design approach, allowing efficient design development & faster implementation
- One common infrastructure – more efficient deployment of new systems
- Cost savings on installation incl. leveraging use of cabling infrastructure
- Common upgrade path / centralised management systems
- Building flexibility to suit tomorrow changing requirements

# Benefits of a 'Integrated Solution'

- Cost reduction opportunities
  - CAPEX (Construction) savings
  - OPEX savings
- Revenue enablers
  - Connectivity/mobility
  - Advertising
  - Tenant services
- Customer / employee enhancements (NFP organisations)
  - Enhanced Customer experience
  - KPI management
